

To do's (on list so we don't forget to discuss/change):

- Use px for margins/padding but not for font sizing?
 - Use em, and % relative to default body text size for titles and headers
- Specify a fall-back font list for each element (no element should list only a single font family)?
 - (h2.uif-headerText) **font: 24px Georgia, Helvetica, sans-serif;**
See example potential problem with no fallback (H2's in the portal) when user changes display or font size preferences (in some browser/OS combinations):

- Don't inherit KS L&F fonts/padding by default in the KNS L&F (architect to support theming ... at least 2 themes)

- Make sure we can inherit the users' font preferences when set in the OS & browser settings.
- Make sure we have a fall-back list for each element (currently in the portal there is no fall-back for the H2s)
